

## MAINTENANCE FREE

**As we enter retirement age we often find that jobs around the garden that were once pleasurable become difficult to manage. Without regular maintenance lawns, patios and decking can become patchy, slippery or uneven.**

Although tending flower beds and pots can still bring pleasure, mowing or weeding a lawn can be a physically daunting task. With the damp UK weather, patio slabs can become a slippery hazard, and this can deter the elderly from enjoying their outdoor space.

Gardens with large over hanging trees can cause a dark, damp environment. Existing slabs can become covered in moss and algae making walking treacherous. With physical challenges to face, replacing uneven slabs with artificial grass is a safer, maintenance free way forward.

Decking can also be hazardous when wet and over the winter months can become covered in algae. By covering with a underlay and artificial grass, a previously dangerous area can become a vibrant, lush lawn area.

Often slabs can become loose and rocky. While on site installing artificial grass many uneven slabs can be repaired using a full mortar base.

### Artificial Grass & the elderly

Natural gardens require a large amount of maintenance, from weeding to feeding and cutting and edging lawns. However, it is not only the aesthetic aspect of a garden that can be affected if the garden becomes neglected. Pathways can become slippery or loose and uneven. Decking if not properly treated annually can become incredibly dangerous underfoot in the wet months.

The maintenance on an artificial lawn is minimal. If your garden or neighbours' gardens contain deciduous trees, leaves must be brushed off to prevent a build-up. This can be done with either a stiff brush or a leaf blower. Animal faeces can easily be removed and wiped clean. For a lush, green maintenance free lawn all year round heard-wearing, our UK made, UV protected artificial grass is definitely the answer.

Artificial Grass Cambridge not only replace existing lawns with artificial grass but also cover decking areas, remove or mend patio areas and can also insert new pathways /ramps into a garden to make them more accessible.
