

IDEAL FOR FAMILIES

Like many families in the UK life can become busy with work, school runs, family activities and hobbies. When the weekend comes around we want to enjoy our free time rather than be maintaining our gardens.

Whether you like to just relax, run about or play with your pets in your garden an even lawn is an important feature. If you're a parent or pet owner, you'll know that children and animals don't mix well with pristine lawns. The wear and tear that they cause can easily make your grass yellow and patchy and unusable. Trampolines and play equipment can leave areas shadowed eventually killing off the grass in large patches.

Transforming the garden

Patchy, uneven gardens not only look unsightly but can make dangerous areas for young children to play in. Once the existing lawn is removed a consolidated base is installed for perfect drainage. No more muddy puddles to be trampled back into the house.

With very little maintenance needed time can be spent enjoying the outside space.

Artificial Grass and families

If you're the sort of person who likes to use their garden to host summer BBQs and other social events, but who doesn't really like maintaining it, tough and durable artificial grass

is definitely the right choice for you. Enjoy watching the family have fun in the fresh air without the aftermath of a patchy, worn lawn!

Young children can benefit from an extra playroom outside with a clean environment to play and discover the outdoors. Older children can play sports without sliding in mud patches in front of a goal and ruining the lawn.

As artificial grass doesn't need sunlight to make it look green and fresh, it's the perfect choice for homes that don't sit in sunlight throughout the day. Whether your garden gets ten minutes or ten hours of sunshine, your lawn will continue to look good all year round and for years to come. Previously unused corners can be transformed into play areas or seating areas. Artificial grass can also help the 10 million Brits who suffer from symptoms of hay fever each year. Around 95% of sufferers are allergic to grass pollen so an artificial alternative can help alleviate allergies and let you enjoy being outside in the fresh air without suffering from the symptoms of hayfever.
